1.0 Features

- Single-chip USB to Serial (RS232) asynchronous serial data transfer interface
- Fully Compliant with USB Specification v2.0 (Full-Speed)
- [USB-IF Logo Compliant with TID 40001367](#)
- UHCI/OHCI (USB1.1), EHCI (USB 2.0), xHCI (USB 3.0) Host Controller Compatible
- On-chip USB 1.1 transceiver, 5V→3.3V regulator, and 96MHz Clock Generator
- Built-in RS232 Transceiver
 - Meets EIA/TIA-232F standards with 5.0V power supply
 - Guaranteed 1000kbps transmission rate under loading
 - Three RS232 Drivers design
 - Five RS232 Receivers (always active)
 - Latch-up free
- RS232 Serial Port Output Interface
 - Full-duplex transmitter and receiver (TXD and RXD)
 - Six MODEM control pins (RTS, CTS, DTR, DSR, DCD, and RI)
 - 5, 6, 7 or 8 data bits
 - Odd, Even, Mark, Space, or None parity mode
 - One, one and a half, or two stop bits
 - Parity error, frame error, and serial break detection
 - Programmable baud rate from 75 bps to 1M bps
 - Provides RS232 power down indicator pin
 - Works with existing PC COM Port software applications
- Extensive Flow Control Mechanism
 - Adjustable high/low watermark level
 - Automatic hardware flow control with CTS/RTS or DSR/DTR
 - Automatic software flow control with XON/XOFF
 - Inbound data buffer overflow detection
- Configurable 512-byte bi-directional data buffer
 - 256-byte outbound buffer and 256-byte inbound buffer; or
 - 128-byte outbound buffer and 384-byte inbound buffer
- Supports Remote Wake-up from RS232 input pin signals (RI, RXD, DSR, DCD, CTS)
- Four (4) General Purpose I/O (GP0, GP1, GP2, & GP3) pins
- On-chip OTP (One Time Programmable) ROM for writing startup device configurations
- Provides royalty-free Virtual COM Port (VCP) drivers for:
 - [Windows 8, 7, Vista, XP, 2000 \(Microsoft Certified WHQL Logo Drivers\)](#)
 - Windows Server 2003, 2008, 2008 R2, 2012
 - Windows CE 4.2, 5.0, 6.0, and Windows Embedded Compact 7
 - Windows XP Embedded (XPe), Point-of-Service (WEPOS), and POSReady
 - Mac OS 8/9, OS X
 - Linux/Android kernel 2.4.31 and above includes built-in virtual serial port drivers
 - [Android Java Driver Library for USB Host API Devices](#) (no root permission needed)
 - Provides Driver Customization for Customer USB VID/PID and special baud rates
- -40°C to 85°C Operating Temperature
- Small footprint 28-pin SSOP IC package (RoHS compliant and Pb-free Green Compound)

3.0 Introduction

PL2303RA provides a convenient solution for connecting an RS232 full-duplex asynchronous serial device to any Universal Serial Bus (USB) capable host. Prolific provides highly compatible Virtual COM Port drivers that simulate the traditional COM port on most operating systems allowing the existing applications based on COM port to easily migrate and be made USB ready.

PL2303RA also integrates a high baud rate RS-232 transceiver that meets the EIA/TIA-232F and CCITT V.28 communications interface specifications. The RS-232 transceiver is a 3-transmitters and 5-receivers device with a high-efficient charge pump circuit embedded. This high-efficient charge pump circuit with 1uF external capacitors provides the bipolar output to the transmitters, and makes the transmitters to deliver the RS-232 output voltage levels. Under normal operation, PL2303RA operates at very low power consumption with guaranteed data rate up to 1000kbps. PL2303RA also has an active-low shutdown indicating pin that can serve as a shutdown indicator for special application purposes.

By taking advantage of USB bulk transfer mode, large data buffers, and automatic flow control, PL2303RA is capable of achieving higher throughput compared to traditional UART (Universal Asynchronous Receiver Transmitter) ports. The flexible baud rate generator of PL2303RA could be programmed to generate any rate between 75 bps to 1M bps.

PL2303RA is exclusively designed for mobile and embedded solutions in mind, providing a small footprint that could easily fit in to any connectors and handheld devices. With very small power consumption in either operating or suspend mode, PL2303RA is perfect for bus powered operation with plenty of power left for the attached devices.

6.0 EEPROM Configuration

The default configuration descriptors are stored in the chip internally which will be loaded during power-on reset or USB bus reset whenever OTPROM (One-Time Programmable ROM) is empty. Several of the USB descriptors could be modified and stored to the OTPROM during device startup like Vendor ID (VID), Product ID (PID), Serial Number, Product String, and other configuration descriptors. The OTPROM can be programmed twice using the dedicated PL2303RA EEPROM Writer software and PL2303RA OTPROM USB Voltage Converter. Contact Prolific or authorized distributors.

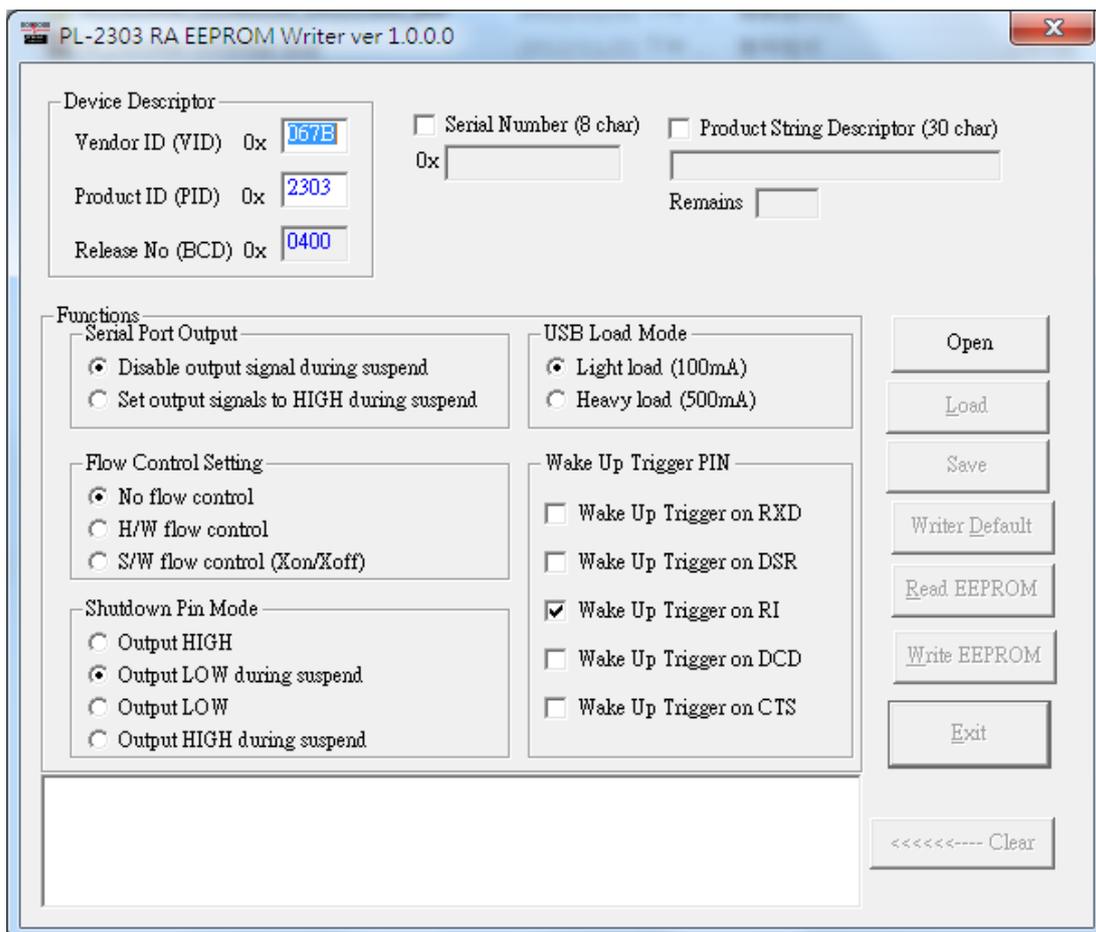

Figure 6-1 PL2303RA EEPROM Writer Program

Table 6-1 EEPROM Writer Configuration

Descriptors	Default Value	Description
Vendor ID (VID)	067B (hex)	USB unique Vendor ID of Company or Manufacturer. This ID is applied and registered from USB-IF. Refer to this website for applying VID: http://www.usb.org/developers/vendor/
Product ID (PID)	2303 (hex)	USB Product ID assigned by Company or Manufacturer.

Rel. No. (BCD)	0400	This field reports the release number of the PL2303RA USB device. This item is fixed and cannot be modified.
Serial No. (8 hex characters)	Disabled	This field sets the product USB serial number. Entering a unique serial number allows the device to be assigned the same COM Port number even when plug to other USB ports of the same PC.
Product String Descriptor	None	This field when entered will be the string displayed by Windows and other OS when device is first detected and before driver is loaded or driver not installed.
Remains	2	The PL2303RA has an integrated OTPROM (One-Time Programmable ROM) which allows to write EEPROM settings without the use of an external one. However, the OTPROM can only be written twice and cannot be erased. PL2303RA does not support external EEPROM.

Functions	Default Value	Description
Serial Port Output	Disable	This option allows setting the serial port output pin signals (TXD, RTS, DTR) to HIGH during suspend mode.
USB Load Mode	Light Load (100mA)	This option sets the USB device maximum power if 100mA (low-power) or 500mA (high power).
Flow Control Setting	No Flow Control	This option allows to set the flow control initial setting to none, H/W, or S/W control. Note: H/W and S/W flow control can also be set and configured on customer/user serial communication software.
Wakeup Trigger Pin	Wakeup trigger on RI	This option allows setting the trigger pin for remote wakeup function. When in suspend mode, changes on the enabled serial port input signals could trigger a wakeup event.
Shutdown Pin Mode	Output LOW during suspend	This option allows setting the Shutdown pin (Pin 8) mode to Output HIGH or LOW on normal mode or Suspend mode.

7.0 Data Formats & Programmable Baud Rate Generator

The PL2303RA supports versatile data formats and has a programmable baud rate generator. The supported data formats are shown on Table 7-1. The programmable baud rate generator supports baud rates up to 1Mbps and standard driver already supports several baud rate settings shown in Table 7-2.

Table 7-1 Supported Data Formats

	Description
Stop bits	1 1.5 2
Parity type	None Odd Even Mark Space
Data bits	5, 6, 7, 8

Table 7-2 Baud Rate Settings (Supported by Standard Driver)

| Baud Rates (bps) |
|------------------|------------------|------------------|------------------|------------------|
| | 460800 | 134400 | 19200 | 1800 |
| | 403200 | 128000 | 14400 | 1200 |
| | 268800 | 115200 | 9600 | 600 |
| | 256000 | 57600 | 7200 | 300 |
| 921600 | 230400 | 56000 | 4800 | 150 |
| 806400 | 201600 | 38400 | 3600 | 110 |
| 614400 | 161280 | 28800 | 2400 | 75 |

Note: For other special baud rate requirements, please contact Prolific FAE for driver customization support. The baud rates listed on the above table are already supported by the standard driver and only needs to be set by the COM port configuration of the application software on the PC.

8.0 Application Reference Circuit Diagram

Following is an example of using the PL2303RA as a USB to RS232 converter. The PL2303RA already includes an integrated RS232 transceiver to convert the TTL levels USB serial interface to RS232 levels as well as converting the +5V nominal VCC to the $\pm 6.5V$ required by RS232. The PL2303RA built-in transceiver supports up to 1Mbps baud rate transmission which is very ideal for many designs requiring high speed performance. Contact Prolific FAE for more PCB design support.
