

DESCRIPTION

The Sylvania SC-3525 is a 2-gun, electrostatically focused and deflected cathode-ray tube for displaying simultaneously two independently controlled traces. It features linear post deflection acceleration for maximum pattern linearity and deflection factor uniformity. All deflection plate leads are brought through the neck. The screen is aluminized for high brightness. Potted, flying leads are used in place of a conventional base to minimize overall length.

CIRCUIT VALUES

Grid No. 1 Circuit Resistance	1.5 Megohms	Max.
Deflection Circuit Resistance	1.0 Megohm	Max.

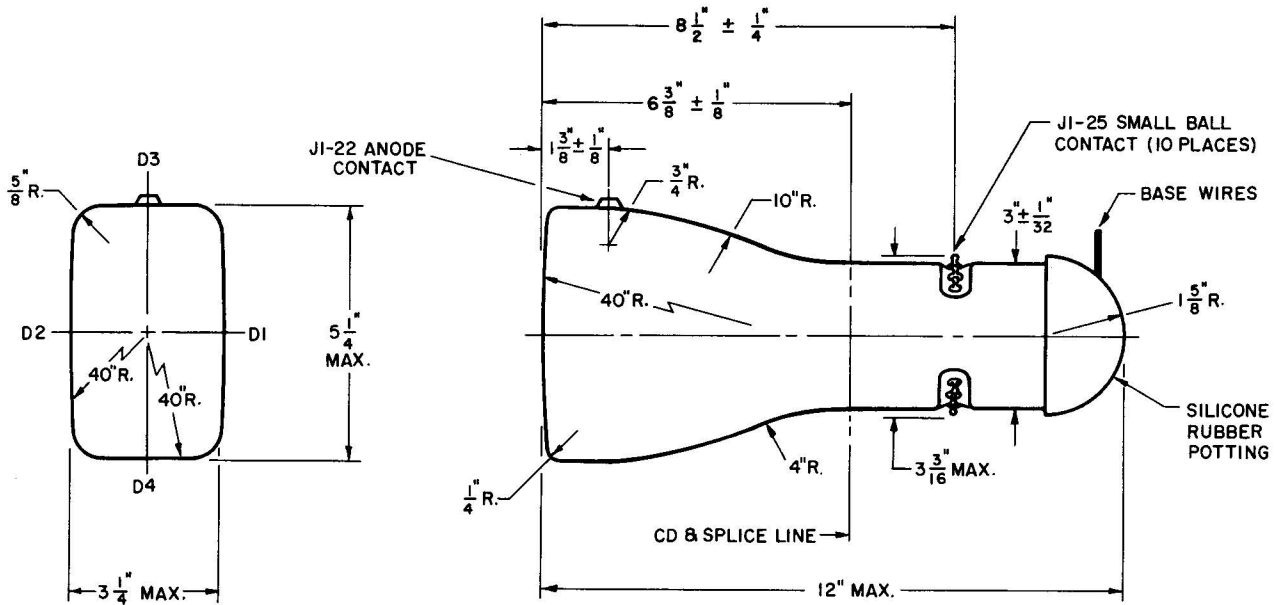

NOTES:

1. Values are for each gun unless otherwise specified.
2. Visual extinction of undeflected focused spot.
3. Per MIL-E-1 and at Ib3 of 25 μ a. (This current shall be in addition to the value of Ib3 read at cutoff.)
4. The deflection factor (for both D1-D2 and D3-D4 plate pairs separately) for a deflection of 75 % of the minimum useful scan will not differ from the deflection factor at 25 % of the minimum useful scan by more than the indicated value.
5. The shielded, undeflected focused spots will fall within a $\frac{5}{8}$ " square, the center of which coincides with geometric center of the tube face and the sides of which are parallel to the deflection axes.
6. Useful scan shall be measured from the center of the square as specified in Note 5 for spot centering.
7. The deflection of one beam when balanced dc voltages are applied to the deflection electrodes of the other gun shall be less than the specified value.
8. All portions of a raster pattern adjusted so its widest points just touch the sides of a 4.05 x 2.05 inch rectangle will fall within the area bounded by the 4.05 x 2.05 rectangle and an inscribed 3.95 x 1.95 rectangle.

WARNING:

X-ray radiation shielding may be necessary to protect against possible danger of personal injury from prolonged exposure at close range if this tube is operated at higher than the manufacturer's Maximum Rated Anode Voltage or 16,000 volts, whichever is less.
