

Dear Charles

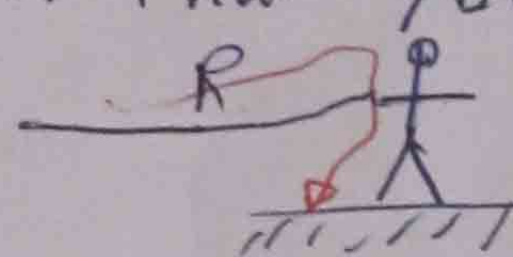

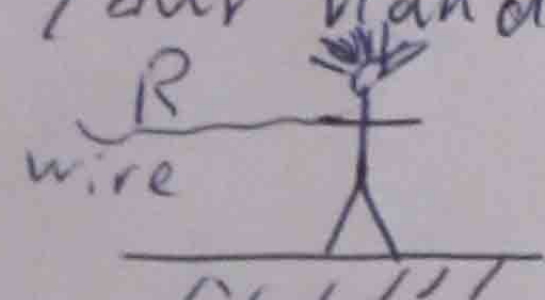

Hi

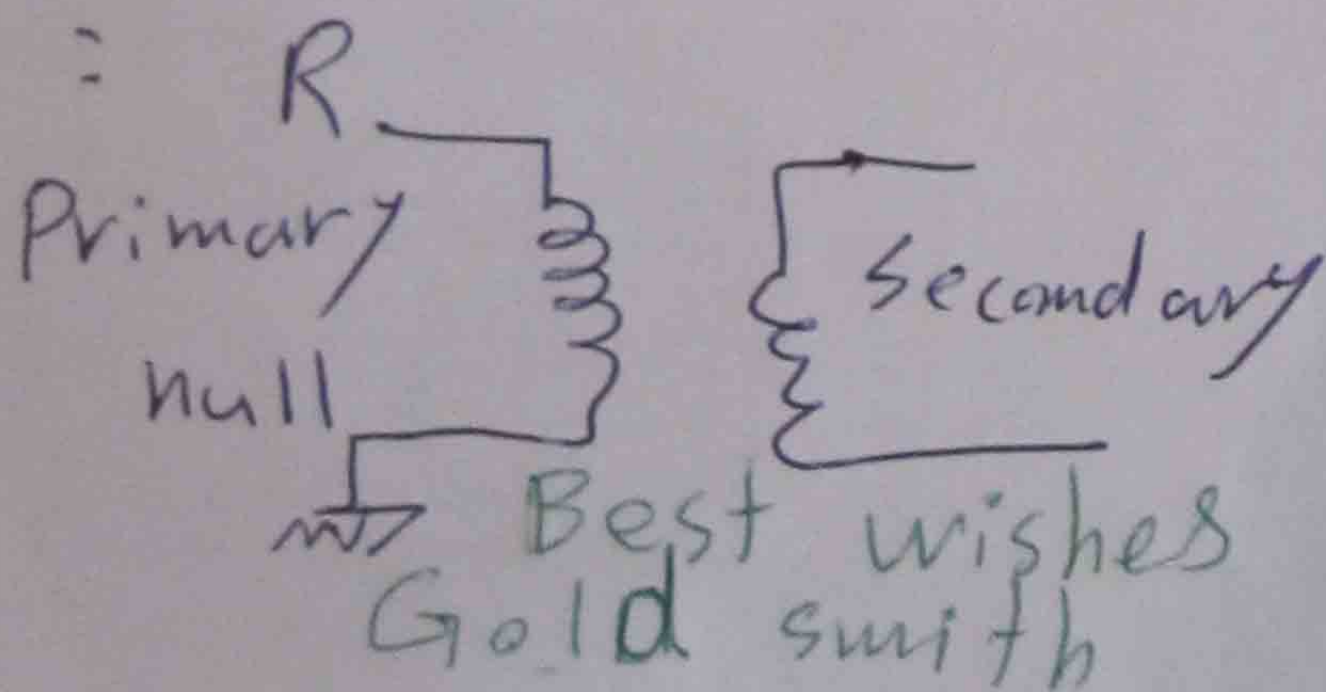

See below please:

Here is Generator

when we want
get an output
From this
Generator,
we'd better to

Create a standard and very big (Deep) hole
In ground and then put the null wire on it.
thus the equipments after power house will be
cheaper. So consider that you are this
human \Rightarrow  \Rightarrow  your legs are
on ground. so the Phase (R) can close a
loop From your hands and legs up to ground
then:  then you'll see your
skeleton!!! But when we have a transformer

the Voltage Across
the secondary has not
any Relation and
connection to the earth
so you'll be safe!
